Chapter 13 Current Landscape and What Next : Notable Projects

Town Crier
Provides real world authentic feed into smart contracts

SETLCoin
Technology make use of virtual wallets to exchange assets over the network between peers and allow immediate settlement via Ownership of SETLCoin

TEEChan
Trusted execution environment for scalability and efficiency

Falcon
Provides a fast relay network for broadcasting bitcoin blocks over the network

Bletchley
Advance version of oracles ; Cryptlets ; resides outside blockchains & can be called by smart contract using secure channels

Zcash on ethereum
Create a privacy layer using zk-SNARKs

CollCo
Real time transfer of commercial bank money

Cello
On demand blockchain as a Service

Qtum
Combining capabilities of bitcoin and ethereum

Bitcoin-NG
Mechanism of leader election which verifies TXs as soon as they occur

Solidus
Permissionless Byzantine Consensus

Hawk
Smart contract system that allows encryption of TXs on the blockchain
